**Java Full-Stack Developer | Web Applications | Backend Integration**

Java-focused developer and B.Tech Data Science graduate with experience building web applications, Java software, and real-time multiplayer systems. Skilled in debugging, software testing, and integrating databases, APIs, and device services.

## TECHNICAL SKILLS

**Languages:** Java, JavaScript, TypeScript, PHP, Python, SQL
**Web:** React, Node.js, Express, HTML/CSS, Bootstrap, AJAX, Socket.IO, Three.js
**Data & platforms:** MySQL, Firebase, Firebase Cloud Messaging, Android Studio
**Tools & testing:** Git, GitHub, Vite, Vitest, npm workspaces, debugging, software testing
**AI/ML & integration:** OpenCV, YOLOv8, Vosk, Scikit-learn, TensorFlow/Keras, Raspberry Pi

## EXPERIENCE

**AI Training & Evaluation Contributor - Handshake AI** *Remote Contract | 2026*
*Projects: Octahedron Comparisons, Voyager V6, and Seal India*

- Project Octahedron - Comparisons: compared model outputs and built evaluation tasks; Project Voyager - V6: watched videos and confirmed event sequences.
- Project Seal India: crafted difficult prompts to test web-search and reasoning, and documented reproducible issues.

**Web Development Intern - SkillCraft Technology** *Dec 2025*

- Built practical web projects, including a responsive landing page, stopwatch, Tic-Tac-Toe game, and task planner using HTML, CSS, and JavaScript.

**Java Development Intern - Oasis Infobyte** *Oct-Nov 2024*

- Worked on Java applications, debugging, and code optimization through hands-on implementation.

## PROJECTS

**DuneRaze - Real-Time Multiplayer Racing & Strategy** *TypeScript, React, Node.js*
GitHub Repository | Live Game

- Built a 2-4 player browser game with responsive controls, private player worlds, checkpoints, terrain editing, and reconnect recovery.
- Deployed server-validated multiplayer rooms on Render with HTTPS and WebSocket networking; verified four-player sessions and reconnection.
- Verified 1,585 automated cases across client, server, and shared modules, alongside strict type checks, lint, and production-build checks.

**StreetGuardian AI - Emergency Detection System** *Python, Vosk, OpenCV, Firebase*

- Built a voice-triggered safety prototype that detects distress keywords, captures camera snapshots, and sends emergency notifications through Firebase and Telegram.
- Integrated Vosk, OpenCV, Firebase Cloud Messaging, Telegram, and Raspberry Pi components.

**Building Management System (EMMS)** *PHP, MySQL, Java, Firebase*
Web source

- Built a PHP/MySQL web application for tenant records, maintenance requests, rent tracking, notifications, and administration.
- Later developed a Java/Firebase Android companion with role-based access, authentication, and real-time updates.

**Nurture Care - Healthcare Management** *PHP, MySQL, Bootstrap*
GitHub Repository

- Built user and admin workflows for care services, requests, staff management, and complaint tracking.

## ACHIEVEMENTS

**Domain Best Team - AI for Social Good** - HackVriksh Hackathon 2025 (StreetGuardian AI).

## EDUCATION

**B.Tech in Data Science - MLR Institute of Technology, Hyderabad** *2022-2026*
CGPA: 8.42 | Coursework: Data Structures, Algorithms, DBMS, AI/ML, Data Mining

## CERTIFICATIONS

NPTEL: Programming in Java
HackerRank: SQL Certificate
Smart Interviews: DSA Smart Coder
Cisco: Data Analytics Essentials
